WELCOME LETTER

Dear Colleagues,

The Alliance of Molar Incisor Hypomineralization (MIH) Investigation and Treatment (AMIT) will take place 4-6 November, 2021 in the beautiful city of Dubai, UAE.

AMIT's primary purpose is to record the extent of the MIH problem worldwide and to investigate the aetiology and thus facilitate the appropriate prevention and treatment of the disease.

Until now the data we have regarding the extent of the problem are scarce and unreliable as there is no uniform way of recording MIH. In the literature we will find some data on the composition and anatomy of the affected hard teeth structures but very limited information on the causative factors of the disease, how we can prevent it and what the most appropriate treatment is. The data suggest that there are many factors that can cause MIH and there is a clear need of collaboration between dentistry and medical specialties in order to understand the problem.

It is necessary to introduce a reliable way of recording MIH, educate investigators around the world that will record the extent of the problem. Moreover, the Alliance would be the platform that will bring together researchers from different disciplines that will jointly investigate the aetiology of MIH.

Therefore, at the moment this alliance is directed to the dental and medical professionals and other stakeholders associated with MIH (eg. local and regional public health sector officials) to collaborate towards the targets mentioned above.

After these issues are tackled then the public will be reached in order to apply this knowledge.

Plan to join us!!

Prof. Norbert Krämer
AMIT Director

Prof. Monty Duggal
AMIT Co-Director

Dr. Elias Berdousas
AMIT Local Chairperson

Dr. Tarun Walia
AMIT Local Chairperson

FOCUSED TOPICS

'Molar Incisor Hypomineralization' (MIH), is a highly prevalent condition affecting the dental health of children. The available data on prevalence of Molar Incisor Hypomineralization (MIH) is limited and at present there is no uniform and reliable way to record it. MIH is a multi-factorial condition, and there is an apprehensible need of collaboration between dentistry and other medical specialties in order to understand the problem unambiguously. The primary purpose of AMIT is to record the extent of the problem world-wide and to investigate the aetiology; thus facilitating the management of MIH by appropriate prevention and treatment.

The conference will be the first ever international opportunity to exchange distinct information and discuss on this ever-increasing oral health problem in children. It aims to bring together leading scientists from different disciplines, researchers, clinicians and dental industry partners from around the globe to discuss, formulate and agree on internationally accepted guidelines on the clinical management of MIH.

- ❖ Epidemiology of MIH
- ❖ Etiology of MIH
- ❖ Histological, Structural and Mechanical Characteristics of MIH-Affected Enamel
- ❖ Diagnostics of MIH
- ❖ Remineralization, Prophylaxis and Desensitizing of MIH-Affected Teeth
- ❖ Pain Control of MIH-Affected Teeth
- ❖ Sealing of MIH-Affected Teeth
- ❖ Filling of MIH-Affected Teeth: Direct, Indirect, Temporary
- ❖ Orthodontic Treatment of MIH
- ❖ Hypo Mineralized Primary Teeth
